

Solar DuraFlex

With its internally illuminated sign face, intelligent charge regulator and on-board replaceable battery pack, the Solar DuraFlex is our most advanced retro-reflective self-righting traffic bollard. The new one-piece rubber foot prevents vandal rotation, whilst still enabling the bollard to flex through an impact and return to a true vertical stance time after time... after time...

Features:

- Single aspect
- High power Cree LEDs
- Automatic dusk to dawn operation
- Triple mono crystalline solar panels
- On-board charge regulator protection
- Accessible non-spillable lead acid batteries

Installation options:

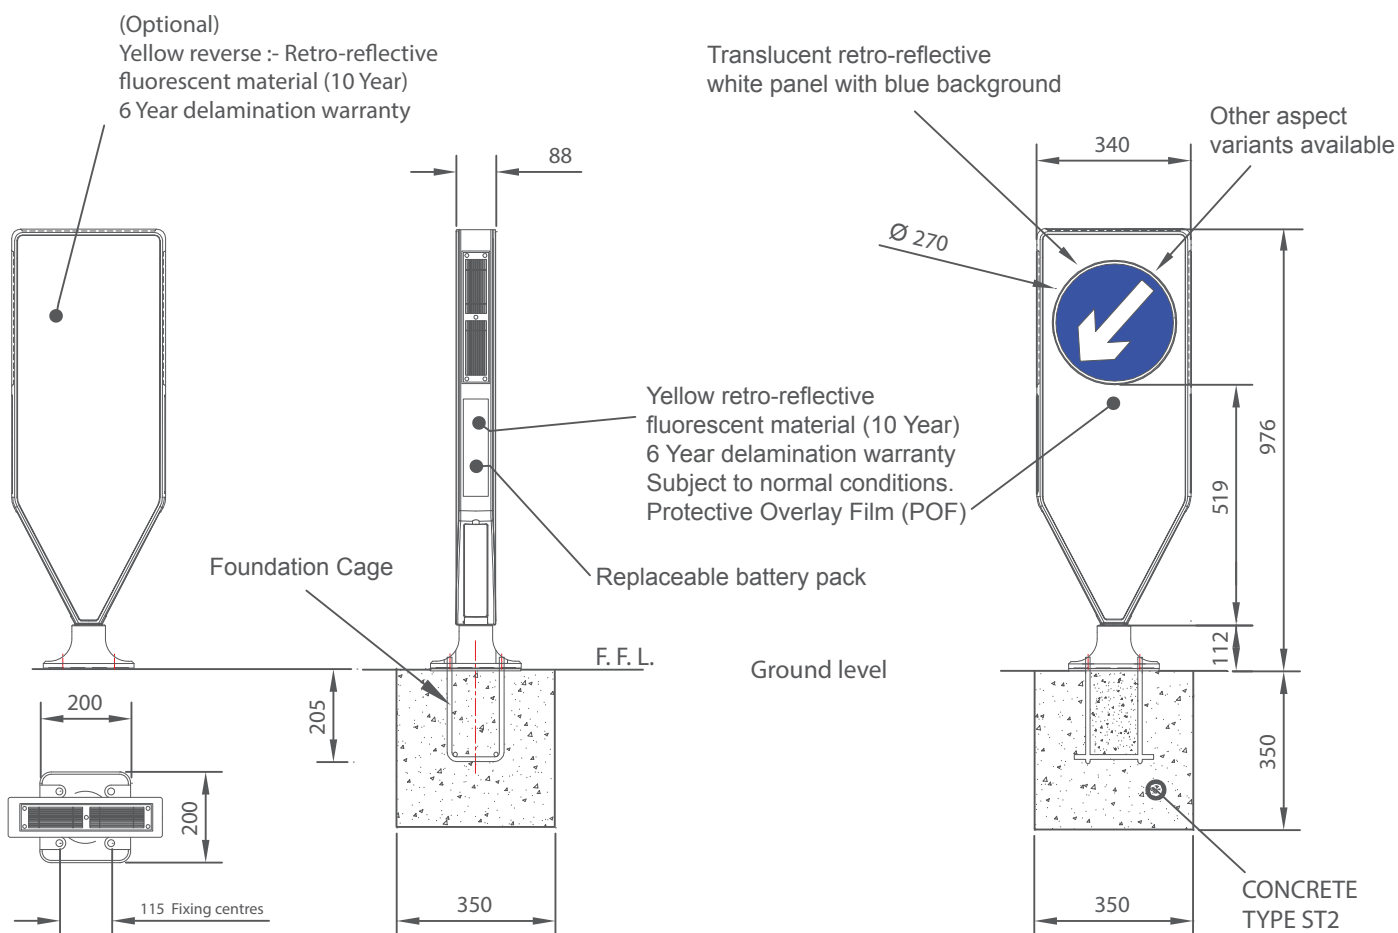

The Solar DuraFlex is a totally self-contained unit and is easy to install using our foundation cage, NAL socket, or can even be retro-fitted to any redundant base light.

Maintenance:

The Solar DuraFlex is very low maintenance. All surfaces (including the solar panels) of the Solar DuraFlex can easily cleaned with water mixed with a mild detergent. Regular inspection and cleaning schedule is recommended to ensure optimum performance.
